INTERNATIONAL PATENT CLASS- G06F01500; G06F00100

APPLICANT(S)- SEIKO EPSON CORP

PUBLICATION COUNTRY- Japan

PURPOSE: To simply execute the start by constituting the controller so that at the time of discriminating a password of an information processor, even if a request storage means is set to the side for discriminating the password, the password is not discriminated in the case a specified keyboard input is discriminated.

CONSTITUTION: In the case a keyboard is depressed, an interruption by a hardware is generated, and simultaneously, its interruption processing program is actuated. When a specified keyboard input determined in advance is recognized, the interruption processing program sets a flag of a specified address of a RAM, and thereafter, continues a conventional keyboard interruption processing. Even if a memory with backup is set so as to execute a password discrimination at the time of the start of a system, this flag shows a fact that it is requested so as to skip the password discrimination in reality. Also, in the case an input of the specified keyboard is not recognized, the conventional keyboard interruption processing is continued.
